Instructions for the EEL RaceCard

Definition: ***in-the-money*** means that a horse finishes the race in 1st, 2nd or 3rd.

DATA**EEL**® uses two ALGORITHMS: **Concert**™ and **Aptitude**™.

The **Concert**™ and **Aptitude**™ algorithms EACH have their own independent opinion (prediction) for the outcome of the race.

Each ALGORITHMS' evaluation of the race are shown below in the 2 tables:

Concert™ algorithm

more likely to win

horse name & number		opening odds	**Concert**™
Outlaw Kid	3	5-2	74.3
Talented Man	5	6-1	60.0
Biz Biz Buzz	2	3-1	58.0
Determined Kingd	6	10-1	54.7
Matta	7	8-1	48.5
Winfromwithin	1	2-1	47.2
Bourbon Music	4	15-1	45.8

less likely to win

Aptitude™ algorithm

horse name & number		opening odds	**Aptitude**™
Bourbon Music	4	15-1	29.7
Talented Man	5	6-1	29.1
Biz Biz Buzz	2	3-1	28.6
Determined Kingd	6	10-1	28.0
Outlaw Kid	3	5-2	27.5
Winfromwithin	1	2-1	27.3
Matta	7	8-1	26.9

The **Concert**™ value represents how a horse has previously performed live, on the spot in front of an audience, from the gate to the end of a race.
It's a number that is calculated based on many factors and variables, but the focus is primarily on when the horse was put in front of a crowd, under a spot-light ready to go with all the pressures and expectations before and during a race.

The **Aptitude**™ value represents the horse's inherent ability, what the horse is capable of doing or becoming.
It's a number that is calculated based on many factors and variables, but the focus is primarily on the horse's *Future*. **Aptitude**™ is also a measurement that involves a horse's *Pace* and *Stamina* or more simply thought of as a horse's *Running-Style*.

Ranking: the **Concert**™ and **Aptitude**™ algorithms Rank the **horse names** & **number** from top of the list to bottom of the list; the top position of the list is the **horse** more likely to be ***in-the-money***. The bottom position of the list is the **horse** less likely to be ***in-the-money***.

What if a horse is **SCRATCHED** from a race ?

Cross it off the list - draw a horizontal line thru the **Horse Name**, **Number**, **opening odds** and **algorithm number**. The horses **Outlaw Kid** and **Biz Biz Biz** were *scratched* in the race below. Due to the *scratches*, the *Concert*™ *algorithms picks* ***Talented Man***, ***Determined Kingd***, and ***Matta*** to be the best choices to be in-the-money. The *Aptitude*™ *algorithms picks* ***Bourbon Music***, ***Talented Man***, and ***Determined Kingd*** to be the best choices to be in-the-money.

	horse name & number		odds	**Concert**™
more likely to win	~~Outlaw Kid~~	~~3~~	~~5-2~~	~~74.3~~
	Talented Man	5	6-1	60.0
	~~Biz Biz Buzz~~	~~2~~	~~3-1~~	~~58.0~~
	Determined Kingd	6	10-1	54.7
	Matta	7	8-1	48.5
	Winfromwithin	1	2-1	47.2
less likely to win	Bourbon Music	4	15-1	45.8

	horse name & number		odds	**Aptitude**™
more likely to win	Bourbon Music	4	15-1	29.7
	Talented Man	5	6-1	29.1
	~~Biz Biz Buzz~~	~~2~~	~~3-1~~	~~28.6~~
	Determined Kingd	6	10-1	28.0
	~~Outlaw Kid~~	~~3~~	~~5-2~~	~~27.5~~
	Winfromwithin	1	2-1	27.3
less likely to win	Matta	7	8-1	26.9

What if an **algorithm number** is '$\mathcal{X}$' ?

Sometimes a Concert™ or Aptitude™ **algorithm number** can be '$\mathcal{X}$'

'$\mathcal{X}$' means NOT enough data to calculate an accurate opinion/prediction.

When a horse has never raced before OR has never finished in-the-money for a race, you will see $\mathcal{X}$ for the **algorithm number**. Often this occurs in MAIDEN races.

Note: The RaceCard always groups horses with $\mathcal{X}$ values in the lower positions of the ranking list – this DOES NOT mean the algorithm has a poor opinion of these horses. It only means that the algorithm does not have enough data to make a proper opinion/prediction.

horse name & number		odds	**Concert**™
Quintecents	4	5-2	65.5
Wherever You Are	3	6-1	41.3
Gaelic Nation	2	3-1	29.8
Classic Alphie	1	30-1	x
Devilnthebluegra	5	20-1	x
Crazy Cavalier	6	6-1	x
Without Borders	7	4-1	x
Tomorrow Never C	8	4-1	x

$\mathcal{X}$ means NOT enough data to calculate an accurate opinion/**prediction**. These horses are an 'unknown'.

Just because a horse with an $\mathcal{X}$ is near the bottom of the list does not mean it has a poor chance of finishing in-the-money. $\mathcal{X}$ just means the horse is an 'unknown' and could actually be placed ANYWHERE on the **Ranking list**. *Fun Fact: If a horse with an $\mathcal{X}$ wins the race, we call that horse "a sleeper"*

Examples : Using the EEL RaceCard

horse name & number		odds	**Concert™**
Khafre	3	6-1	50.1
Divine Armor	7	2-1	48.6
Colloquy	4	8-1	48.3
Bourbon Calling	1	8-1	45.1
Trafalgar	6	7-5	42.8
Predicted	2	20-1	40.0
First Glimpse	5	8-1	38.4

horse name & number		odds	**Aptitude™**
Trafalgar	6	7-5	29.7
Khafre	3	6-1	26.7
Colloquy	4	8-1	26.1
First Glimpse	5	8-1	25.3
Bourbon Calling	1	8-1	24.8
Divine Armor	7	2-1	24.2
Predicted	2	20-1	23.0

Concert™ algorithm puts #3 Khafre on top of its list (most likely), Aptitude™ algorithm puts #3 Khafre 2nd on its list (2nd most likely). Both algorithms support that #3 Khafre will do well in this race.
#3 Khafre is likely to be *in-the-money.*

horse name & number		odds	**Concert™**
Marshmallow Quee	3	1-1	69.7
Qualificata	1	5-1	65.3
Amy The Butcher	2	8-1	61.4
Demar'S Legacy	4	4-1	53.7
Gallop D'Hermes	6	12-1	44.8
Miss Sayely	5	7-2	38.5

horse name & number		odds	**Aptitude™**
Miss Sayely	5	7-2	28.9
Demar'S Legacy	4	4-1	28.7
Amy The Butcher	2	8-1	28.1
Marshmallow Quee	3	1-1	27.2
Gallop D'Hermes	6	12-1	27.1
Qualificata	1	5-1	26.5

The Concert™ and Aptitude™ algorithms put #2 Amy The Butcher on their lists in one of the top three positions. Since no other horses were put in any of the top 3 positions by either algorithm, one should consider #2 Amy The Butcher is likely to finish in-the-money, and might win the race.

horse name & number		odds	**Concert™**
Maker'S Candy	6	5-2	67.5
Bold Endeavor	2	3-1	56.9
Winit	5	8-1	52.4
Accretive	1	9-5	51.8
Synthesis	3	10-1	51.4
He'Smyhoneybadge	4	9-2	51.1

horse name & number		odds	**Aptitude™**
Winit	5	8-1	29.0
He'Smyhoneybadge	4	9-2	28.6
Maker'S Candy	6	5-2	28.5
Accretive	1	9-5	28.3
Bold Endeavor	2	3-1	27.8
Synthesis	3	10-1	24.2

In this race it could be concluded that #6 Maker'S Candy and #5 Winit are likely finishing *In-the-money(1st, 2nd or 3rd).*
The Concert™ algorithm puts #6 Maker'S Candy on top as the best horse in the race, however, the Aptitude™ algorithm puts #5 Winit on top as the best horse in the race.

So, which algorithm do you go with?
It is up to the user to choose which algorithm they want to lean into more.

It is a lot of fun playing with the Concert™ and Aptitude™ algorithms.
Use one algorithm for a race, then use the other algorithm for another race.

After watching a few races with the EEL RaceCard and paying attention to each algorithm's success, a user will get a feel for which algorithm to lean-into more.

Try picking a **mix** of the two algorithms' predictions for a race – we call it "*doing the weave".*
